

WHAT CAN YOU DO FOR PLANET EARTH?

The future of our amazing planet – and everything that lives on it – depends on us.
We must act now before it's too late.

Think twice before buying plastic bottles and other things made of plastic.

Our oceans are full of plastic that has been thrown away.

This plastic is killing huge numbers of animals who can get caught up in it, or poisoned, if they mistake it for food.

If we don't change the way we use plastic, the future of all life on Planet Earth will be at risk.

Try to recycle things instead of throwing them away. Recycling is when old objects are used to make something new.

Many things can be recycled, including plastic, paper, glass and metal.

You can also reduce the amount of energy and other materials you take from the Earth.

Switch off lights and other machines when they're not in use.

Don't waste water.

Buy things without much packaging so there's less waste.

Try not to take so many car journeys.

Try to find ways to reuse what you already have.

Take your own bags with you when you go shopping.

Use leftover packaging for arts and crafts.

Save fruit and vegetable peelings to make food – called compost – for growing plants.

Give away old toys or clothes for someone else to use.

Small changes can make a BIG difference. By doing what we can and working together, we can save Planet Earth.
