

Sea creature spiral

Find and circle the names of 15 sea creatures hidden in the whirlpool of words.

Turtle generations

Sea turtles crawl onto beaches to lay their eggs. Tiny baby turtles hatch out, then make their way back to the sea to grow up and eventually have babies of their own.

One sea turtle lays eight eggs.
When they hatch out, half are female.
Those females go on to lay six eggs each.

If all the eggs hatch, how many turtle babies will there be?

.....

Sea creature spiral:

SEAL, PARROTFISH, CLOWNFISH, SEASLUG, DOLPHIN,
OCTOPUS, HERMIT CRAB, CONCH, JELLYFISH, SEA TURTLE,
CUTTLEFISH, SAND EEL, SQUID, GIANT CLAM, NAUTILUS

Turtle generations: 24 turtle babies

Dangerous depths

Can you find the little red fish a safe route to the rock cave where her friends are hiding from these hungry horrors of the deep? She must not swim into the light of the anglerfish's glowing lures, or she might get gobbled up.

This is an anglerfish.
